### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 15-20, the prior art fails to teach a capacitive load driving circuit comprising:

an output circuit comprising: a first NPN transistor the collector of which is connected to a power supply terminal and the emitter of which is connected to an output terminal; and a first PNP transistor the collector of which is connected to a ground terminal and the emitter of which is connected to said output terminal; and

an overcurrent protection circuit comprising: a second NPN transistor the collector of which is connected to the base of said first NPN transistor, and the emitter of which is connected to said output terminal, and further the base of which is connected to a first supply voltage for generating a predetermined electric potential that is higher than the electric potential of said ground terminal; and a second PNP transistor the collector of which is connected to the base of said first PNP transistor, and the emitter of which is connected to said output terminal, and further the base of which is connected to a second voltage supply for generating a predetermined electric potential that is lower than the electric potential of said power supply terminal,

in combination with the other limitations in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
